

DP5 DIGITAL POTENTIOMETER

APPLICATION NOTE - HEAT TUNNELS/OVENS

Heat Tunnels include a broad category of applications where Time in Process is the key metric. The DP5-GP will display Time in Process directly to the operator in MM:SS, avoiding any need to convert a rotary speed pot scale or RPM display into time. Applications include but are not limited to heat treat, baking/cooking, drying, curing, and shrink tunnels where conveyor belt speed is used to control time in process.
